

WHAT IS CLAIMED IS:

1. A combination of a magneto-generator and a resin molding die, the combination comprising:
 - said magneto-generator having,
 - a) a bowl-shaped flywheel (11);
 - b) a plurality of magnets (12) mounted on an inner peripheral surface of said flywheel (11); and
 - c) a resin (14) filled around each of said magnets (12) for fixedly securing said magnets (12) to said flywheel (11); and
 - said resin molding die (21) having,
 - a) an outer peripheral surface (21d) positioned in opposition to an inner peripheral surface of said flywheel (11), and
 - b) projections (21a) provided in said outer peripheral surface (21d) abutting against and retaining said plurality of magnets (12) in a circumferential direction at predetermined positions, respectively.
